Lessons Learned Case Study

Major Objective

Develop:

- A) One Lessons Learned statement from each subgroup
- B) Two or three priority recommendations or corrective actions
- C) One consensus Lessons Learned statement gleaned from the best conclusions of each mini-group's suggestions

From A,B,C, above, gain insights into a potentially wide spectrum of LL results

Lessons Learned Case Study Approach

Instructions:

- 1. Read case study.**
- 2. Break into small groups and discuss the case study.**
- 3. Create a Lessons Learned statement.**
- 4. Prioritize two or three recommendations or corrective actions.**
- 5. Decide who will be the spokesperson for your group and write a) your lessons learned statement, and b) two key recommendations on a flip chart and present to the group.**
- 6. As one group, see if we can glean the best possible LL statement and consensus for top recommendations.**
- 7. As a group, discuss the impact of the potential for a wide spectrum of LL outcomes.**
8. Presenters will explain the development of the lessons learned from the actual incident so audience can compare their recommendations to the recommendations that evolved from the actual explosion.
